

# Admin Console Health Check

With frequent new features and changing best practices, it's easier than you think for your IT estate to become vulnerable to external threats.

A health check on your Google Admin console is the best way to ensure everything on your domain is fighting fit.

## Benefits for IT admins

- Peace of mind that everything is set up correctly using current best practices
- Optimally configured policies from a security and functionality standpoint
- Assurance that GDPR and ISO compliance are adhered to
- Reduced future time and effort wastage
- Insightful recommendations from a Google technical expert relevant to the challenges and needs specific to your organisation

## Benefits for your users

- Reduced threat of email spoofing and spam thanks to properly configured service settings
- Ensured accounts are setup correctly and experience is standardised across users and devices
- Appropriate access to apps, websites and services as intended

“ The audit was extremely insightful, helping us identify a number of missing or misconfigured options within our setup as well as addressing key difficulties we had been wrestling with since the switch to the Google platform. The precision and clarity of the report and accompanying discussions meant there was real value to the audit process. ”

- IT Project Manager & IT Developer

We measure everything that matters on your domain to ensure you have the data you need to implement best practices effectively and improve the digital experience and security of every one of your users.

## Basic

Google Workspace Audit Basic is focused on laying a well thought-out foundation to be able to automate and facilitate administration and reduce risks.

- Organisational units
- Groups
- Admin roles and structures
- Basic domain management
- Basic account management
- Core apps and services

## Advanced

Google Workspace Audit Advanced is focused on mapping in detail how tools and setting in Google Workspace are set for your particular business/institution.

- Authentication
- Mail flow
- Data access
- On/off-boarding
- Reports and alerts
- Service settings

All key findings are condensed into an easily digestible summary report, which provides context about identified issues and share insightful recommendations to remedy them.
