chromeOS

Jumpstart your IT with ChromeOS Flex

Experience the power of ChromeOS Flex with Jumpstart: our Proof of Concept programme helps organisations like yours address ageing devices and budget constraints by providing a smooth transition to Google's fast, secure and cost-effective cloud-first operating system.

How Jumpstart works:

1 Identify your devices
We'll help you identify 50 devices you already have that are suitable for converting to ChromeOS Flex.

2 Setup and convert
We'll set up your Google Admin console for you and deploy ChromeOS Flex on your chosen devices.

3 Enrol to manage
We'll enrol your devices so they can be managed via your cloud-based Admin console.

4 Training and support
We'll provide training for your IT staff and share tips to help your users get the most out of their devices.

During your 30-day Jumpstart PoC:

Defining success
We'll collaborate with you to understand what a successful proof of concept needs to achieve.

Measure and validate
We'll track progress against your defined criteria, providing you with tangible evidence of the programme's effectiveness.

Scale up
Upon successful completion of your initial Jumpstart PoC, we'll help you deploy ChromeOS Flex to more devices.

Maximise impact
We'll help you set up the ChromeOS Readiness Tool to uncover more opportunities for a successful rollout by identifying other users who are best suited for the transition to ChromeOS.

The Jumpstart PoC includes:

- 50 Annual Chrome Enterprise Upgrade management licences
- Conversion of existing hardware to ChromeOS Flex (or config and deployment of new devices)
- Set up of organisational units and group policies in accordance with your needs
- Deploying the applications, bookmarks and settings your users need to perform
- Two days of training, tailored to suit your staff's skill levels and schedule

Explore the OS for the new era with a Jumpstart-managed PoC for just £2,000
